

CACTUS JACK RECORDS

FOUNDED IN 2017 IN THE *UNITED STATES* BY TRAVIS SCOTT, AKA JACQUES BERMON WEBSTER

In March 2017, Travis Scott announced in an interview that he was creating his own record label, **CACTUS JACK RECORDS**, so that he could help new artists with potential, just as KANYE WEST and KID CUDI had helped him.

TRAVIS was discovered by KANYE, who opened up the world of rap and production to him. KID CUDI helped him a lot to make music outside the box. In 2012 he signed with Kanye's label G.O.O.D. Music as a producer.

He was key to the compilation YEEZUS and CRUEL SUMMER, where his touch left an important mark. From then on, KANYE became his official mentor, both musically and visually.

From this bond among the three came the first iconic collaborations, such as: Through the Late Night (2016), a track from the album Birds in the Trap Sing McKnight with KID CUDI, and in 2020 the single THE SCOTTS with KID CUDI, which reached number one on the Billboard chart.

With KANYE WEST a collaboration was born that led to worldwide hits such as PRAISE GOD, which is on KANYE's album DONDA.

The help of KANYE and KID CUDI

The help of YE and KID CUDI was very important in creating **CACTUS JACK RECORDS**.

On March 10, DON TOLIVER signed with the label after TRAVIS featured him on the track CAN'T SAY, from the album **ASTROWORLD**, which reached number one on the BILLBOARD 200.

On November 19, 2019, TRAVIS announced the label's first compilation, titled **JACKBOYS**, with TRAVIS SCOTT, DON TOLIVER, **SHECK WES** and SoFaygo.

Some artists linked to **Cactus Jack** are:

- Travis Scott
- Don Toliver
- Sheck Wes
- SoFaygo

The main activities of Cactus Jack include:

1. Music
2. Collaborations
3. Productions

4. Fashion and Creativity

Mathematics in music

In music we can use mathematics to calculate the number of beats in a song.

The formula is:

$$B = 140 \cdot 3 = 420$$

where:

- B is the total number of beats
- 140 is the number of beats per minute
- 3 is the length of the song in minutes

For example, considering a track at 140 BPM lasting 3 minutes:

$$B = 140 \cdot 3 = 420$$

So the track contains about **420 beats**.
